## 👤 Profile

---

I see software development as a hobby rather than a job.

I have had the opportunity to use many technologies by developing desktop and web applications for 6 years. I continue to learn and grow in life using research skills and accumulated experience, following a "be your own teacher" philosophy.

Javascript is my main programming language. I share the projects I have developed to learn and improve myself on Github as open source. I am working as a Front-end developer at Heybooster.

My vision is to develop myself as a high quality software developer/engineer following the ethical code of hackers.
